AGANTHOS

Organising the world's human and artificial agents

The information provided in this presentation (the "Materials") is confidential and proprietary to Aganthos AI, Inc. and is provided for informational purposes only. These Materials contain forward-looking statements, estimates, and projections regarding Aganthos AI's strategy, business model, and future performance. Actual results may vary materially from those projected due to market conditions, technology development, regulatory changes, and other factors. Aganthos AI assumes no obligation to update or revise these forward-looking statements. All intellectual property and content herein remain the sole property of Aganthos AI, Inc. Unauthorized use, distribution, or disclosure is strictly prohibited.

Orchestrate the Future Together

TEAM

Founder: Pioneering AI from Research to Impact

- A decade at the forefront of Reinforcement Learning (RL); AISTATS Best Paper nominee 2022
- From theory to high-impact application: games, high-speed robotics, electron microscopes, web agents and tool calling
- Founding Research Scientist at Convergence AI, leading the research team (Acquired by Salesforce in 2025)

Founder

- Design and implementation of a $2.6B national-scale crisis management team
- Complex coordination and high-stakes decision-making across disciplines, sectors and levels
- Generative AI in Public Health/Medicine/Climate

Founding technical staff

- Experienced SWE building data platforms on AWS and GCP across BMW Group and BMW
- Cloud deployment of custom RAG agents at BMW

Status

Traction

Q4 2025

- ✓ Scientific validation: Neurips workshop paper
- ✓ DE C-Corp incorporation
- ✓ 1st paid partnership secured
- ✓ R&D with a first customer and international researchers
- ✓ Trained proprietary 1.5B/3B parameter models for tool orchestration
- ✓ Early discussions and building relationships for design partnerships with multinational companies

Q1 2026

- ✓ Two ICML submissions
- ✓ Swiss headquarter: Incorporation of Swiss GmbH
- ✓ First revenue-based projects finished
- ✓ RL Post-Trained Medical Model with German University Hospital (+30% improvement over o4-mini on clinical benchmarks)

we enable agents
to learn from experience

AI Agent Challenges

"AI hits a wall" before becoming productive

1. Unreliable & insufficient performance
2. Handling sensitive data
3. Rising model costs

We create measurable value

Improve Performance

Reinforcement Learning (environments) / In-Context-Learning (usage traces)

- Higher success rate
- Fewer human escalations
- Better decision quality

Reduce Cost

Routing + small models

- Lower cost per request
- Lower latency
- Scalable usage

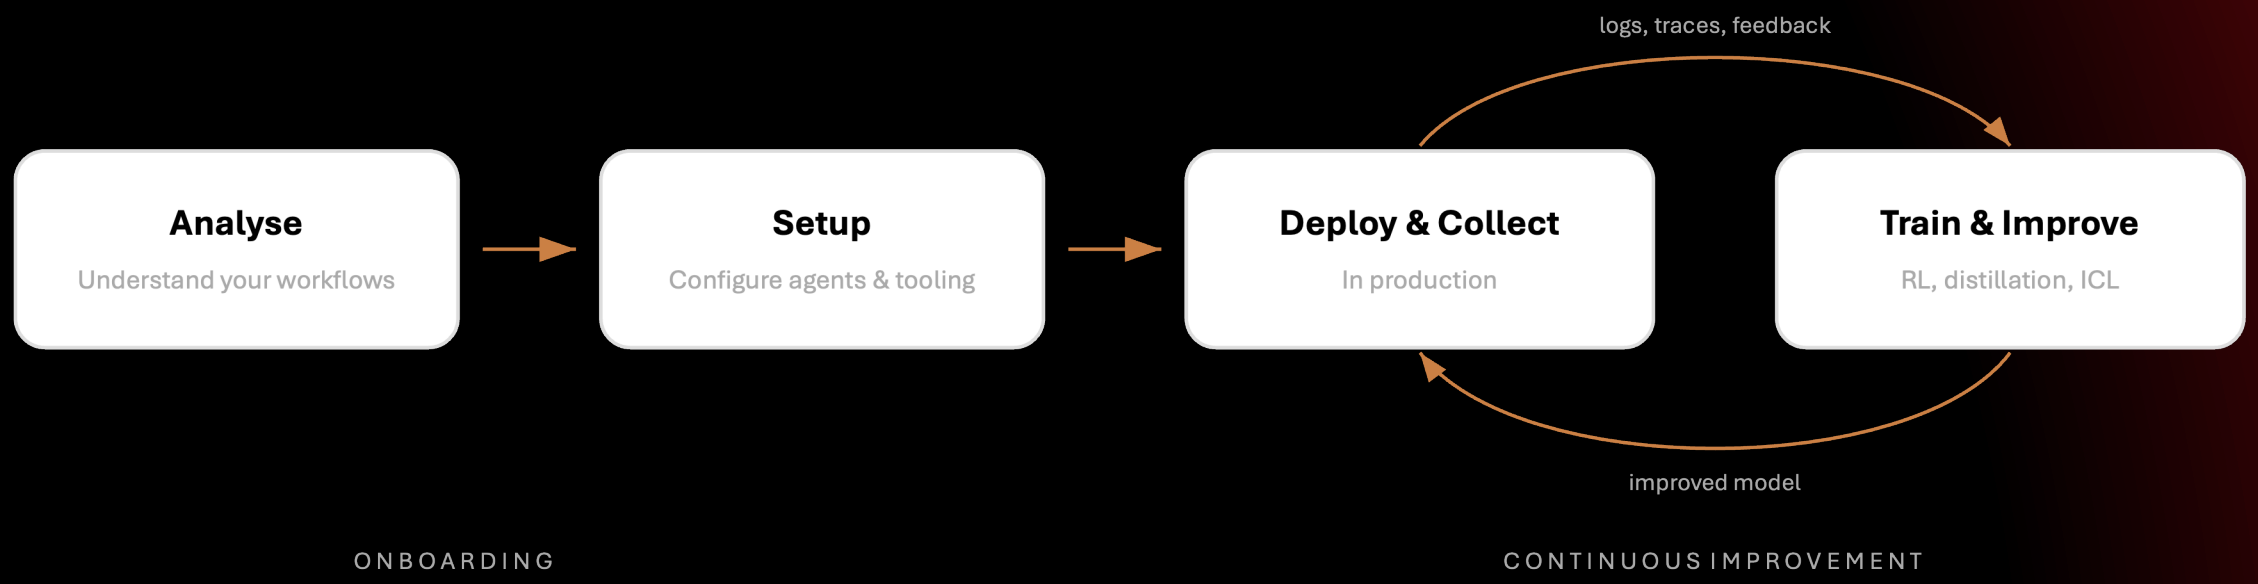
Enable Privacy

Knowledge transfer + local deployment

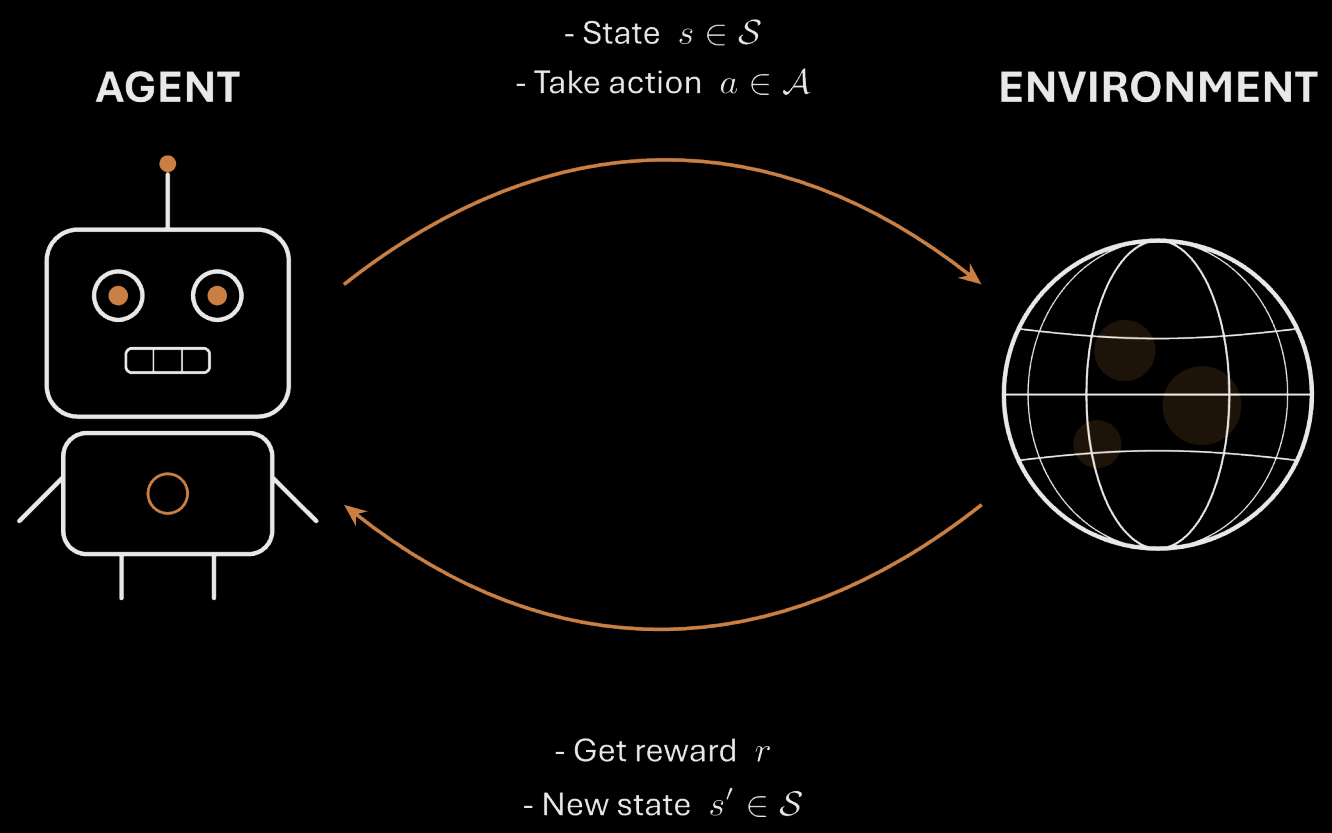
- Data never leaves your organisation
- Vendor independence
- Regulatory compliance

The Learning Flywheel

Learning as a Service



Learning Agents



A Case Study with a large German University Hospital (Post-training as Service)

Important milestone towards a **universal optimization engine for AI agents**:

Successful demonstration with **generalisability to any complex demanding setting**

Performance drives ROI: Potential to save 5-15 full time equivalents in medium to large sized hospitals (>1 Mio Euro)* with +30% improvement over *o4-mini* (generalised Frontier Model) on clinical benchmarks

Cost: Substantial reduction in inference costs

Sovereignty: Working in high-privacy setting

Detailed results not publicly shareable yet. We are happy to share them on a 1:1 basis

*under conservative assumptions

From Pilot to Long-lasting Customer Relationship

CUSTOMER JOURNEY

Identify

- Identify processes for agentic augmentation
- (KPI and stakeholder)

Evaluate

- Test and select the most effective AI models for your organisation (build evaluation set + evaluation standard models)

Optimise

- Enhance AI performance with customised training and adjustments (optimise by In-context learning, fine-tuning or context engineering)

Maintain

- Launch your AI agent and keep it improving with your feedback

Monetisation through hourly setup fees and usage tiers/ maintenance fees

From Paid Pilots to scalable ARR

MONETISATION

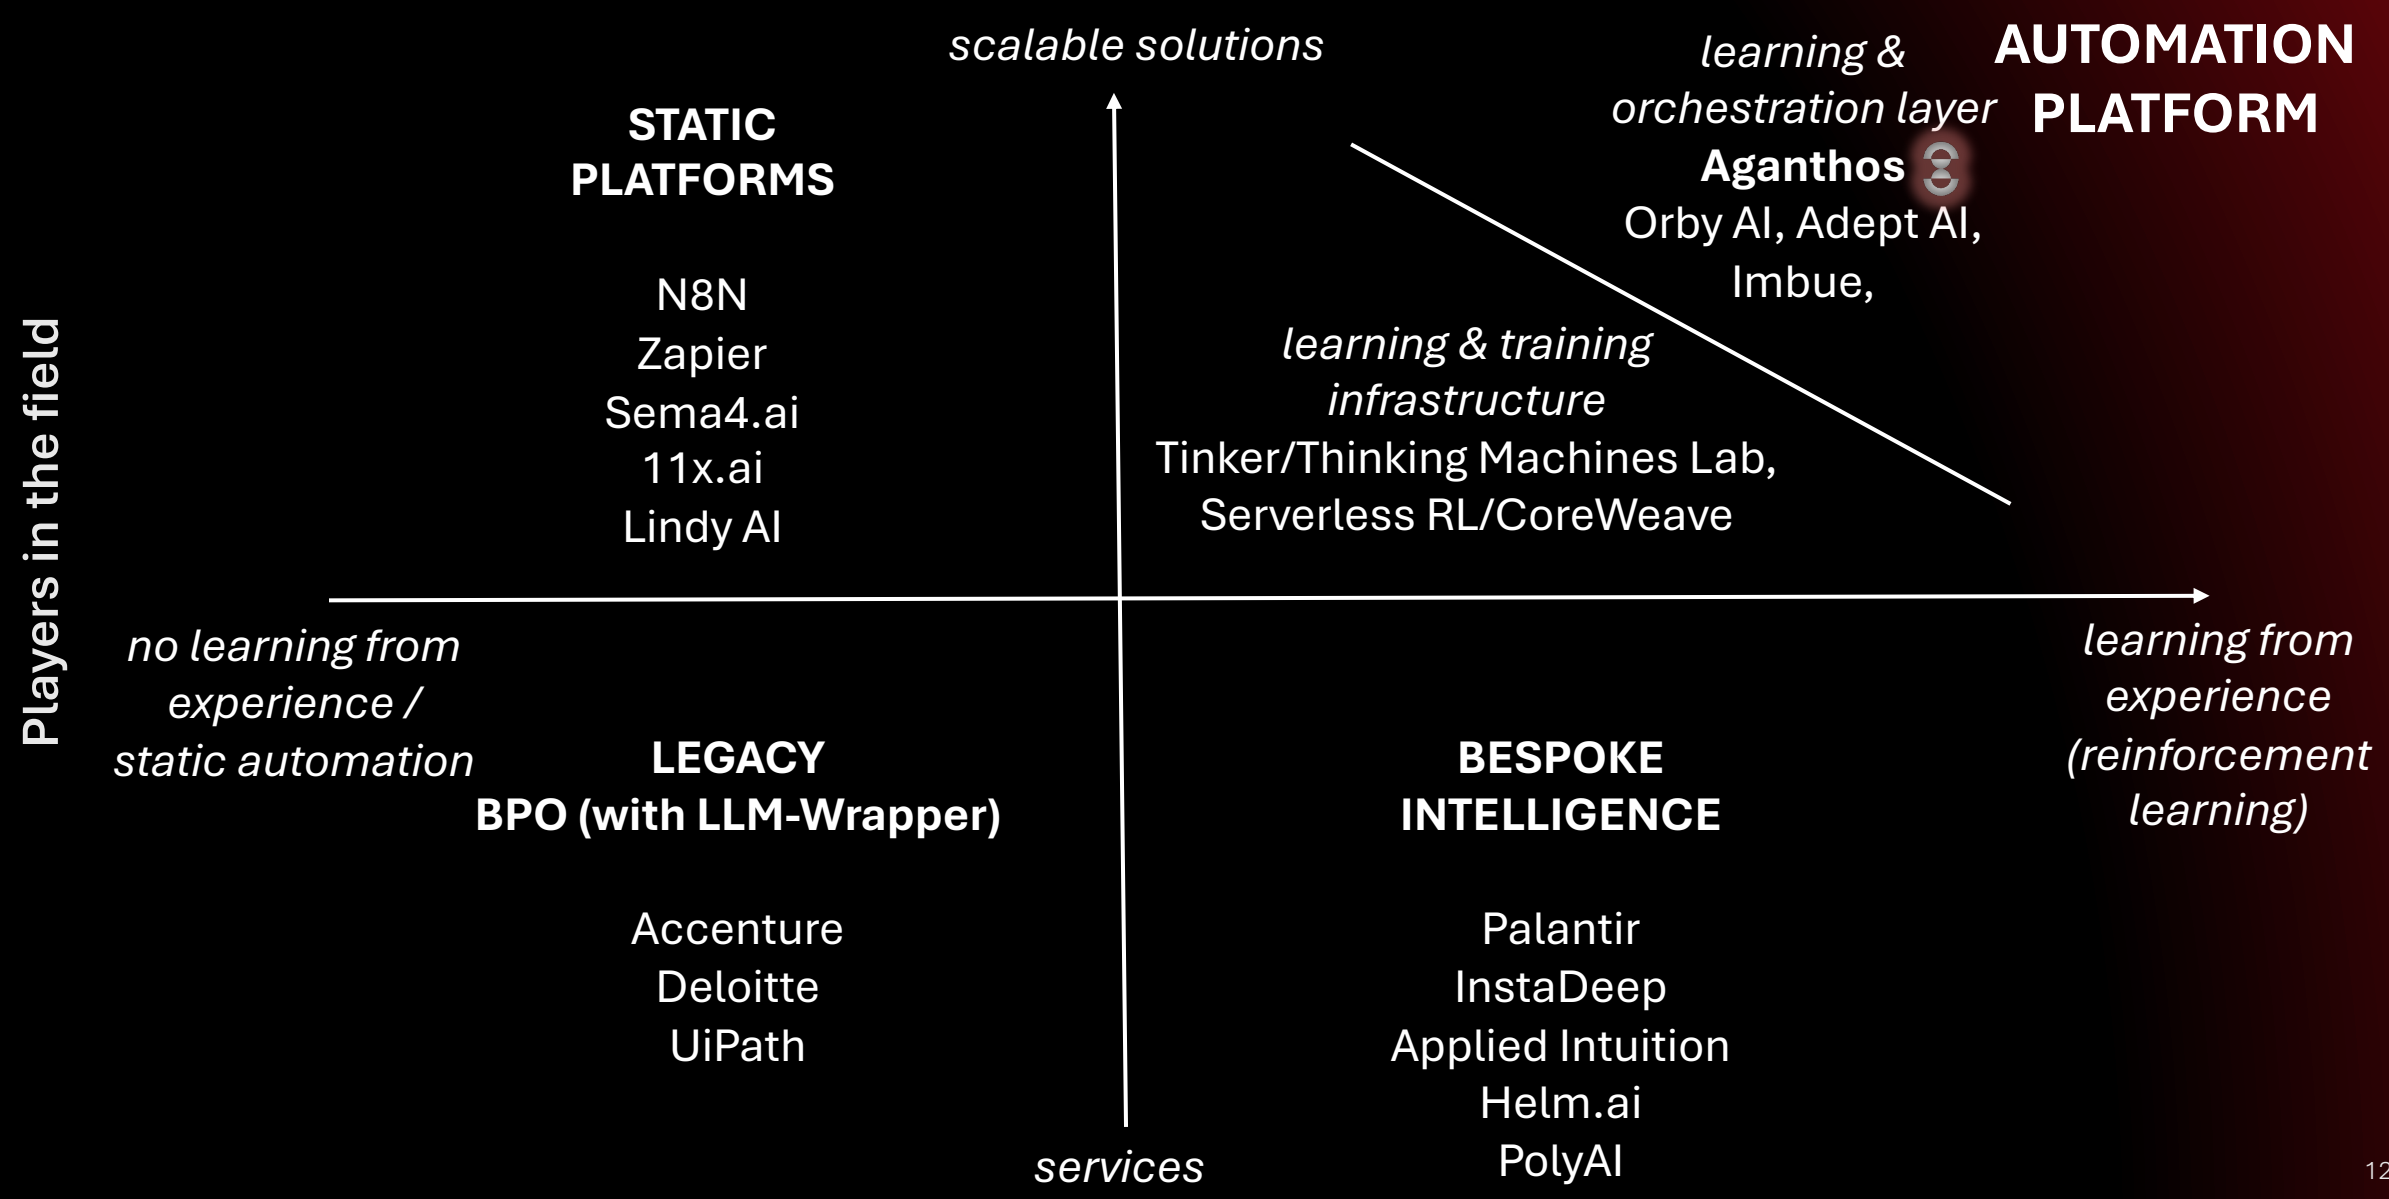
Agent and orchestration learning layer monetisation

1) Hourly setup fees
2) Maintenance fees and continuous improvement fees
3) Usage based tiers of trained model

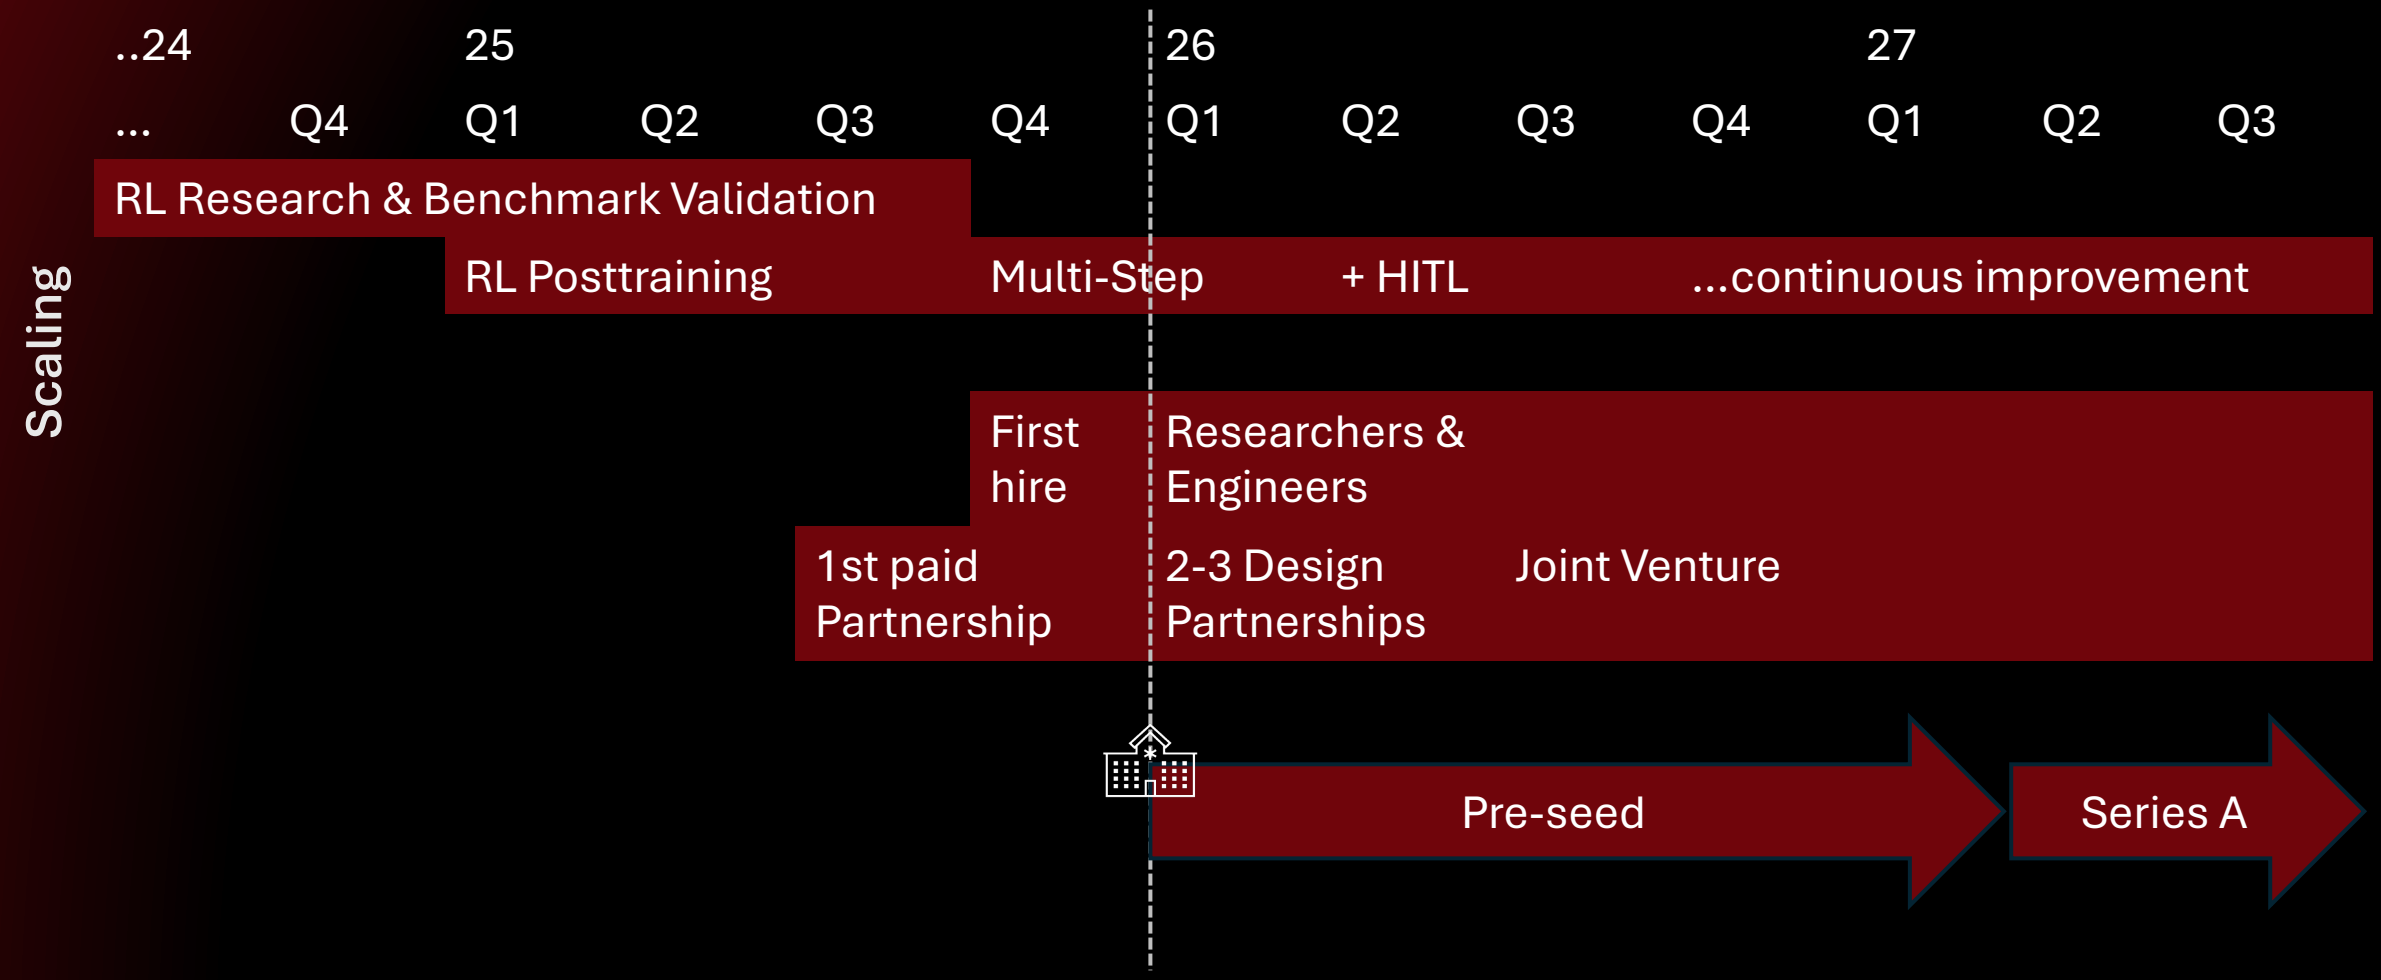
Aganthos Joint Ventures (planned starting in Q2 2026)

1) Equity + selling goods & services
2) Revenue share

Competition Landscape



Proven technical foundation, now ready to scale with partners



*We **empower** professionals to break free from routine tasks.*

*We **orchestrate** a world where human creativity thrives.*

*We **innovate** to build breakthrough solutions for a better future.*

We provide the learning layer for agents that drive performance.
